

RE: reference number

PRIVATE AND CONFIDENTIAL
PATERNITY ANALYSIS - Client

23 January 2008

Dear Client,

Thank you for choosing DNA SOLUTIONS to assist you with your DNA paternity analysis.

We have completed analysing a number of DNA regions from the samples you have supplied to us. Each DNA region we test has a high number of possible combinations.

This means that it is unlikely that any two strangers picked at random would share the same DNA sequence/combination, in any one of these regions. It also means that only the true biological father of any child could possibly share not just one, but ALL of the different DNA combinations in each region tested.

Testing several of these regions gives the results a very high accuracy. The results provide us with two possible scenarios:

- i) Many DNA sequence Mismatches (proving non-paternity)
- ii) ALL DNA sequence Matches (proving paternity)

I hope that this result has set to rest any doubts on your biological origins and relationships. Please do not hesitate to contact us should you have further questions regarding your results.

Kind Regards,

Vern Muir
Chief Scientist
DNA SOLUTIONS

RESULTS

The results of these tests show the following:

Sample Reference	Relationship	Status
Father	Father	DNA Analysed
Mother	Mother	DNA Analysed
Child	Child	Positive, Match/Negative, Mismatch

This test has an accuracy of above **99.9%**.
